The Maritime Engineering Reference Book is a one-stop source for engineers involved in marine engineering and naval architecture. In this essential reference, Anthony F. Molland has brought together the work of a number of the world's leading writers in the field to create an inclusive volume for a wide audience of marine engineers, naval architects and those involved in marine operations, insurance and other related fields. Coverage ranges from the basics to more advanced topics in ship design, construction and operation. All the key areas are covered, including ship flotation and stability, ship structures, propulsion, seakeeping and maneuvering. The marine environment and maritime safety are explored as well as new technologies, such as computer aided ship design and remotely operated vehicles (ROVs). Facts, figures and data from world-leading experts makes this an invaluable ready-reference for those involved in the field of maritime engineering. Professor A.F. Molland, BSc, MSc, PhD, CEng, FRINA. is Emeritus Professor of Ship Design at the

Unfälle bei Kindern passieren am häufigsten im häuslichen Bereich. Die Ursachen liegen im kindlichen Naturell begründet, denn Kinder sind von Natur aus neugierig, wollen sich bewegen und ihre Umgebung erkunden. Die Fähigkeit Gefahren zu erkennen, zu vermeiden und abzuwenden, muss erst noch heranreifen und entwickelt werden. Aber auch die fehlende Beaufsichtigung durch die Eltern, eine risikoreiche Umgebung oder unsichere Produkte führen zu Unfällen bei Kindern. Kinderunfälle lassen sich in sehr vielen Fällen vermeiden. This book is a transcription and reproduction of the training course materials from Course #9 "Avoiding Accidents" When all of your other long term health issues are covered, then the biggest danger of dying becomes Accidents. Since I've had so many premonition experiences I've learned a lot about how they work and am confident we can all learn how to see the probability of the future ourselves. The information and exercises in this book should help you to avoid dangerous situations in your future and therefore be safer and live longer. Our spirit exists outside of time and space and by observing from the core spirit we can do amazing things! Everything You Need to Know about Self-Defense Discover the Secrets of Defending Yourself Today in the United States, a violent crime happens every 19 seconds, and within a single hour, approximately 124 assaults, 24 sexual assaults, 12 rapes, and 2 murders will occur somewhere within the country. Very few people ever expect to be victims of violence, and yet violent crime is far from rare in our society. Because people are so confident that violent crime only happens to other people, but never to them, many individuals never invest the time and effort necessary to learn how to defend yourself in dangerous situations. Instead, people are caught

place. Muggers, robbers, thieves, rapists, and murderers roam the streets, and we're not even talking about simple dumb people who want to pick a fight or drank a little too much and lost their temper. Self-defense can be done with a clean conscience, and should be learned by anyone who finds him- or herself on the street, especially in the evenings. Would you feel safer if you knew how to avoid dangerous situations or neighborhoods? Would you feel safer if you knew you had a weapon, or you could knock someone out with a single kick or punch? Don't even answer these questions, because they're rhetorical. In this guide, you'll be shown the best ways to beat up the bullies when you can't or shouldn't escape. You'll read about things like: Martial arts, Krav Maga, and self-defense techniques. Handling weapons and guns in a threatening situation. Easy ways to avoid danger and stay away from potential harm. Tips for property, car, and home security. How police officers profile and how you can help out. Knowing your legal rights and human rights. How to improvise when you don't have a real weapon meant for self-defense. Trust me, you won't want to ever leave your house again without knowing these techniques. If you've seen any thriller movies or read of any newspaper articles where the victim lost, you'll know that, a lot of times, they could have done better and

The most common way of constructing portfolios is to use traditional asset

allocation strategies, which match the client's risk appetite to a weighted allocation strategy of fixed income, equities, and other types of assets. This method focuses on how the money is allocated, rather than on future returns. The Sortino method presents an innovative change from this traditional approach. Rather than using the client's risk as the main factor, this method uses the client's desired return. • Only book to describe the Sortino method and Desired Target Return™ in a way that enables portfolio managers to adopt the method • Software to implement the portfolio construction method is included free of charge to book buyers on a password protected Elsevier website. Book buyers can use the software to construct portfolios using this method right away, in real time. They can also load in their current portfolios and measure them against these measures. • The Sortino method has been tested over 20 years at the Pension Research Institute. Portfolio managers can be confident of the success of the method, even returns in the economic crisis, in which the method has still beaten all S&P benchmarks.

In this book the author examines the illegal wildlife trade from multiple perspectives: the historical context, the impact on the environment, the scope of the problem internationally, the sociocultural demand for illegal products, the legal efforts to combat it, and several case studies from inside the trade. The illegal wildlife trade has become a global criminal enterprise, following in the footsteps of drugs and weapons. Beyond the environmental impact, financial profits from the illegal wildlife trade often fund organized crime groups and violent gangs that threaten public safety and security in myriad ways. This innovative volume covers several key questions surrounding the wildlife trade: why is there a demand for illegal wildlife products, which actors are involved in the trade, how is the business organized, and what are the harmful consequences. The author performed ethnographic fieldwork in three key markets: Russia, Morocco, and China, and has constructed a detailed picture of how the wildlife trade operates in these areas. Conversations with informants directly involved in the illegal business ensure unique insights into this lively black market. In the course of his journey the author follows the route of the illegal wildlife trade from poor poaching areas to rich business districts where corrupt officials, legally registered companies, wildlife farms and sophisticated criminal organizations all have a share. A fascinating look inside the world

There is increasing interest in the potential of UAV (Unmanned Aerial Vehicle) and MAV (Micro Air Vehicle) technology and their wide ranging applications including defence missions, reconnaissance and surveillance, border patrol, disaster zone assessment and atmospheric research. High investment levels from the military sector globally is driving research and development and increasing the viability of autonomous platforms as replacements for the remotely piloted vehicles more commonly in use. UAV/UAS pose a number of new challenges, with the autonomy and in particular collision avoidance, detect and avoid, or sense and avoid, as the most challenging one, involving both regulatory and technical issues. Sense and Avoid in UAS: Research and Applications covers the problem of detect, sense and avoid in UAS (Unmanned Aircraft Systems) in depth and combines the theoretical and application results by leading academics and

ergonomics in buildings and public design, sustainable design for smart cities, design for the aging population, industrial design, human scale in architecture, and many more. Based on the AHFE 2017 International Conference on Human Factors, Sustainable Urban Planning and Infrastructure, held on July 17-21, 2017, in Los Angeles, California, USA, this book, by showing different perspectives on sustainability and ergonomics, represents a useful source of information for designers in general, urban engineers, architects, infrastructure professionals, practitioners, public infrastructure owners, policy makers, government engineers and planners, as well as operations managers, and academics active in applied research.

Fear can't help you in a dangerous situation. A former FBI profiler shows you what can. As one of the world's top experts on psychopathy and criminal behavior, Mary Ellen O'Toole has seen repeatedly how relying on the sense of fear alone often fails to protect us from danger. Whether you are opening the door to a stranger or meeting a date you connected with online, you need to know how to protect yourself from harm-physical, financial, legal, and professional. Using the SMART method, which O'Toole developed and used at the FBI, we can confidently know how to: Respond to a threat in any situation Hire someone who will work inside your home like

And there are situations when we - parents and loved ones - cannot fully protect them. Sometimes the children can't get out of a difficult situation by themselves. So, they must know how to act at this or that dangerous moment. What if a stranger is trying to molest a child or someone is pretending to "show the puppies" or "give ride" in the car? What if someone is knocking on the door or is trying to break into the house while the child is alone at home? Or maybe your child has come across a pack of dogs on the street. Other situation: the child was caught in a thunderstorm, hail, or hurricane. What if the child was lost in the crowd? The book "How Children Can Avoid Dangers" contains tips and instructions on how to act independently in many dangerous situations. This is the purpose of the book.

Everyone needs this book if they want to know how to get out of difficult situations whether at home or abroad. Written by Rosie Garthwaite, whose career as a journalist started in war-torn Basra, this book combines practical advice with contributions from many journalists and commentators including Rageh Omar and John Simpson, who share their own experience and advice on surviving in difficult and dangerous situations. Topics include how to avoid being misunderstood; how to avoid bombs and booby traps; how to escape from a riot; how to deal

with frostbite and heat exhaustion; how to avoid trouble in sex, love and war; and how cope if you have had a traumatic experience. The author conveys this wealth of practical, sensible advice in a very direct and personal way. In addition, readers hear the voices of many well-known journalists who share their experiences and advice in a very direct and personal way. This book is an enjoyable read as well as a true survival manual which can be enjoyed by both men and women (usually ignored by the 'boys' own' market) and by all ages especially travellers venturing away from home or to extreme destinations for the first time. Medical information has been vetted by Médecins Sans Frontières, one of the world's leading medical charities which specializes in warzones and other trouble spots.

This book examines the role of deceptive tactics in the criminal victimization process, showing how various forms of manipulative aggression can help disguise dangerous advances. The author approaches crime victimization as the final stage in a purposeful, predictable, dynamic, and progressively dangerous process involving interactions between the target and the aggressor. As they prepare for the attack, aggressors may attempt to distract, confuse, and reduce target resistance. While these tactics provide aggressors certain advantages, they can be recognized, anticipated, and managed. By presenting a framework to identify behaviors of concern early in the process, Kenny shows how preventative action can be taken. Proactive intervention may cause aggressors to withdraw before they are fully committed to and confident in their ability to be successful. Those who take steps to reduce vulnerabilities, limit risky behaviors, and avoid dangerous situations can help prevent themselves from being victimized.

The Maritime Safety Committee (MSC) entrusted the revision of the Code of Safety for Fishermen and Fishing Vessels to its Sub-Committee on Stability and Load Lines and on Fishing Vessels Safety (SLF) and recommended that the recent developments in fishing vessel design and fishing operations should be taken into consideration. The revised Code was approved by MSC at its seventy-ninth session in 2004 and approved by the FAO Committee on Fisheries at its twenty-sixth session in March 2005 and the Governing Body of ILO at its 293rd Session in June 2005. The revised version of part A, Safety and Health Practice, of the Code is directed primarily towards Competent Authorities, training institutions, fishing vessel owners, representative organizations of the crew, and non-governmental organizations having a recognized role in crew members' safety and health and training.
