This special issue reports the findings from eight studies which examined children's national identifications and national attitudes. Data were collected from 725 7- and 11-year-old children living in countries that have or have not experienced violence or war in the recent past. Twelve national groups participated in the studies, including Jewish and Arab children (Israel), Bosniak and Serbian children (Bosnia), Catholic and Protestant children (Northern Ireland), Greek-Cypriot and Turkish-Cypriot children (Cyprus), Basque and Spanish children (the Basque Country), and Dutch and English children (The Netherlands and England). The studies examined whether differences in the structure and content of national identity and attitudes result not only from processes of knowledge acquisition but also from cohort and context effects. Developmental and gender differences within each national group, and differences between national groups, are explored in terms of the cultural heritage of the particular group to which the children belong and the patterns of historical and contemporary relationships that exist between their own group and the various outgroups towards which their attitudes were assessed. Findings show that the development of national identifications and national attitudes exhibit considerable cross-national variation as a function of the specific socio-historical contexts within which children develop. These studies, considered together, indicate the need for developmental theorising in this

area to avoid simplistic conclusions based upon data collected within just one specific location. The adoption of a broader cross-national comparative perspective is required when attempting to address questions concerning how children's national identifications and attitudes develop within real-world settings.

Accessible, up-to-date and comprehensive, this is an essential introduction to the French political system. Featuring detailed analysis of the most important debates and controversies concerning French politics today, the expert authors conclude that study of this subject is being transformed in response to a changing global, European and domestic environment. Includes coverage of: * the relationship between president and prime minister * voting behaviour * European integration * the changing parameters of state intervention.

Tiger in an African palace collects eight essays about kinship and belonging that Richard Fardon wrote to complement his monographs on West Africa. The essays extend those book-length descriptions by pursuing their wider implications for theory in social anthropology: exploring the relationship between comparison and historical reconstruction, and questioning the fit between personal, ethnic and cosmopolitan identities in contemporary West African nations. In an Introduction written specially for this Langaa collection, Richard Fardon retraces the career-long development of his preoccupation with concepts of identification and transformation, and their relevance to understanding West African societies

The need to identify and name organisms is fundamental to any area of biological science, basic or applied. In order to study or conduct research on an organism, or to convey information on this organism to others, we must be able to attribute to it a consistent label. Attribution of an incorrect label may have dire consequences if dangerous plant parasites are wrongly identified as members of an innocuous genus. Traditional aids to nematode identification (dichotomous keys) use systematic criteria not always well adapted to practical identification. Their reliance on dichotomous principles does not allow for intra-taxon variability or for missing characters. They are difficult to update and they cannot keep pace with rapidly changing classifications. As experts in everyday life, we recognize a horse or a dog without referring to the taxonomic descriptions of the genera *Equus* or *Canis* and their respective species. Problems in identification arise when we are not experts in the recognition of a particular organism, or group of organisms. Then, frequently in considerable frustration, we reflect on the usefulness of having the advice of an expert in this group. Traditional identification aids are useful tools for the expert identifiers, and for teaching. Their use is often difficult for general practitioners in nematology, and they may lead to incorrect identification, even at the genus level.

The scope of the symposium covers all major aspects of system identification, experimental modelling, signal processing and adaptive control, ranging from theoretical, methodological and scientific developments to a large variety of (engineering) application areas. It is the intention of the organizers to promote SYSID 2003 as a meeting place where scientists and engineers from several research communities can meet to discuss issues related to these areas. Relevant topics for the symposium program include: Identification of

How do France and Germany compare in the world of participatory political communities? This volume sets out an impressive historical, theoretical and institutional framework for a comprehensive, comparative and empirical analysis of the forms, patterns, trends and determinants of citizen participation in two of Europe's largest democracies. Written by an international team of political scientists, it starts with an outline of the participatory traditions in both countries before turning to the theoretical foundations of empirical research regarding the role of political participation in modern democracies. It provides an overview of how the perception of political participation has changed over the years and the forms of both conventional participation, particularly with regard to electoral participation, and unconventional participation like protest and other new forms of citizen involvement are analysed in detail. Exploring new approaches in participation research, social participation is seen as not just correlating with political participation, but as a specific form of civic engagement in itself. A broad range of activities, such as electoral and

party related participation, political protest, participation in voluntary associations, voting in referenda and taking part in dialogue-orientated participatory activities is examined and the analysis identifies which societal, institutional and cultural factors account for the differences and similarities between the two countries.

First published in 1976, this classic volume of original essays provides a unique and comprehensive review of the approaches and assumptions that dominate the field of election studies and voting behaviour. Critical reviews of theory and established research are combined with innovative and original studies of a variety of European countries, as well as North America. The volume presents valuable comparative data and methodological insights, including statistical analyses of voting data and critical accounts of major approaches to the representation of voting and party competition. These include party identification (the socio-psychological approach); dimensional analysis (the production of party spaces based on social and political cleavages); and rational choice analysis (the interaction between voters and parties within a policy space). This edition includes a new introduction by Ian Budge.

The aftermath of Algeria's revolutionary war for independence coincided with the sexual revolution in France, and in this book Todd Shepard argues that these two movements are inextricably linked. *Sex, France, and Arab Men* is a history of how and why—from the upheavals of French Algeria in 1962 through the 1970s—highly sexualized claims about Arabs were omnipresent in important public French discussions, both those that dealt with sex and those that spoke of Arabs. Shepard explores how the so-called sexual revolution took shape in a France profoundly influenced by the ongoing effects of the Algerian revolution. Shepard's analysis of both events alongside one another provides a frame that renders visible the ways that the fight for sexual liberation, usually explained as an American and European invention, developed out of the worldwide anticolonial movement of the mid-twentieth century. process from beginning to end. We examine the identification process for latent (crime scene) prints and how they are identified with these systems. While the primary focus is automated fingerprint identifications, the book also touches on the emergence and use of fingerprints in other biometric systems. Criminal justice administrators, policy makers, and students of forensic science and criminal justice will find a reference to the known limitations and advantages of these systems. This book provides information as to the critical and continual need for properly trained individuals as well as an understanding of the direct and indirect costs associated with maintaining these systems. An understanding of the entire system and what it means will prove invaluable. Why are there missed identifications? Why are identifications made on one database that are not made on another database? Key terms and issues are included, and well as suggestions for improving the overall number of identifications. The book will go beyond process and also discuss issues such as interoperability, management strategies for large databases, contract development, lights out verification and several other issues which impact automated identifications. - The first comprehensive title on this subject area - Outlines in detail the entire process of fingerprint gathering and identity

in which the descendants of Muslim immigrants from Algeria in France perceive and deal with multiple social identifications. Against the background of the theory and methodology (such as Saussure's sign theory, Znaniecki's sociology, and Brubaker and Cooper's concepts), Kubera offers a new analysis into identity in a multicultural society. The book revolves around a combination of the modernist and post-modernist paradigms: highlighting both the constant and situational aspects of social identity. By focusing on identifications, the author shows how to overcome the problem of "intangibility" of identity in research practice. Touching on colonialism, gender, religion, migration, and racism, this will be an important contribution to students and scholars across sociology, anthropology, political science, law, and international relations.

There can scarcely be a greater tribute to the vitality of the Fifth Republic's democracy than this monumental work. A searching analysis of how the will of the voters is translated into authoritative political decision making, this book not only uncovers political truths about contemporary France but also provides a model for the study of other popular forms of government. The authors set out to find an answer to the perplexing question of how representative government operates in France in the seemingly unstable context of multiparties. By interviewing voters as well as legislators in 1967 and in 1968 after the great upheaval, and by monitoring policies of the National Assembly from 1967 to 1973, the authors test relationships

between public opinion and decision making. They are able to sort out the abiding political cues that orient the French voter, to establish the normal electoral processes, to gauge the nature of mass perceptions of the political options available to voters, and to interpret the strikes, riots, and demonstrations of 1968 as a channel of communication parallel to the electoral process itself. Lucid in style, methodologically sophisticated, and often comparative in approach, *Political Representation in France* is a seminal work for political scientists, sociologists, and historians.

This book provides a new interpretation of the relationship between consumption, drinking culture, memory and cultural identity in an age of rapid political and economic change. Using France as a case-study it explores the construction of a national drinking culture -the myths, symbols and practices surrounding it- and then through a multisited ethnography of wine consumption demonstrates how that culture is in the process of being transformed. Wine drinking culture in France has traditionally been a source of pride for the French and in an age of concerns about the dangers of 'binge-drinking', a major cause of jealousy for the British. Wine drinking and the culture associated with it are, for many, an essential part of what it

Download Free Identifications Of French People Of Algerian Origin

means to be French, but they are also part of a national construction. Described by some as a national product, or as a 'totem drink', wine and its attendant cultures supposedly characterise Frenchness in much the same way as being born in France, fighting for liberty or speaking French. Yet this traditional picture is now being challenged by economic, social and political forces that have transformed consumption patterns and led to the fragmentation of wine drinking culture. The aim of this book is to provide an original account of the various causes of the long-term decline in alcohol consumption and of the emergence of a new wine drinking culture since the 1970s and to analyse its relationship to national and regional identity.

"Forensic document examination is the study of physical evidence and physical evidence cannot lie. Only its interpretation can err. Only the failure to find it, or to hear its true testimony can deprive it of its value." - Roy Huber, author A definitive review of handwriting identification, this book presents, in a general manner, how to approach document examination and then, in particular, how to apply handwriting identification to the document. Types of handwriting are discussed in detail. For the first time in the field of questioned document

examination, *Handwriting Identification: Facts and Fundamentals* consolidates the pertinent information from published and unpublished sources respecting writing, that is essential to the expansion of a practitioner's general knowledge of handwriting identification and to the proper education of novices. Written in a question and answer format, the book suggests some of the questions that one might ask of an examiner and provides the answers that knowledgeable and competent examiners should be expected to give. This book is a valuable addition to law libraries and to every practicing document examiner, as well as every lawyer handling cases in which the authenticity of handwriting might be disputed.

Identifying the individual in the 20th century has given rise to technical innovations including fingerprint analysis and DNA profiling, as well as methods for classifying identities, such as identity cards and digital records. This book explores the link between these techniques and the literary representation of self-identity in the same period.

The first-century Judaic understanding of the identity and nature of the Messiah has been a much-debated topic among biblical scholars and preachers alike. So too has the messianic identity and nature of Jesus himself. Bekele

Deboch informs these debates with fresh evidence outside the traditional scriptural references to miracles, and supernatural identifications by demons and God himself, as well as earthly identification by human beings. With thorough narrative criticism and analysis of contemporaneous literature, this book brings insightful new conclusions that transform our understanding of the biblical messianic identity revealed in the person of Jesus. Jesus not only self-identified with the marginalized and liminal but also experienced extreme marginality himself, to the point of shameful death on a tree. Jesus' church around the world has the responsibility to herald his messianic identity and salvation to the marginalized of today. Bekele Deboch has followed Christ's example of walking with the marginalized and makes here a powerful case for the church to do the same.
