

Practical Histology For Medical Students

This book is designed for undergraduate medical and dental students. The present updated edition is an illustrated account of microscopic structures of tissues and organs in a simple and precise language. The text is extremely student-friendly. Concise, point-wise presentation of text for easy learning and quick recapitulation during exams Line diagrams for basic understanding of the tissues/organs Pencil sketches of sections (haematoxylin & eosin stained) along with salient points of identification, well integrated with text for understanding technical details of structures at the backdrop of theory Practicals comprising excellent quality large sized microphotographs at the end of the theory with detailed explanations of what students are expected to observe Clinical correlation of certain important structures Self-assessment exercise at the end of each chapter for revision of the topics studied

The histology text the medical field turns to first -- authoritative, concise, beautifully illustrated, and completely up-to-date More than 600 full-color illustrations For more than three decades, Junqueira's Basic Histology has been unmatched in its ability to explain the relationship between cell and tissue structure with their function in the human body. Updated to reflect the latest research in the field and enhanced with more than 600 full-color illustrations, the thirteenth edition of Junqueira's represents the most comprehensive and modern approach to understanding medical histology available anywhere.

This book has been designed to help medical students succeed with their histology classes, while using less time on studying the curriculum. The book can both be used on its own or as a supplement to the classical full-curriculum textbooks normally used by the students for their histology classes. Covering the same curriculum as the classical textbooks, from basic tissue histology to the histology of specific organs, this book is formatted and organized in a much simpler and intuitive way. Almost all text is formatted in bullets or put into structured tables. This makes it quick and easy to digest, helping the student get a good overview of the curriculum. It is easy to locate specific information in the text, such as the size of cellular structures etc. Additionally, each chapter includes simplified illustrations of various histological features. The aim of the book is to be used to quickly brush up on the curriculum, e.g. before a class or an exam. Additionally, the book includes guides to distinguish between the different histological tissues and organs that can be presented to students microscopically, e.g. during a histology spot test. This guide lists the specific characteristics of the different histological specimens and also describes how to distinguish a specimen from other similar specimens. For each histological specimen, a simplified drawing and a photomicrograph of the specimen, is presented to help the student recognize the important characteristics in the microscope. Lastly, the book contains multiple "memo boxes" in which parts of the curriculum are presented as easy-to-remember mnemonics.

From the INTRODUCTION. IN taking the class of Practical Histology at the Owens College Medical School during the Summer Sessions of 1882-1883, it has been my custom to give each student "sheets" containing a short account of the chief points to be observed in the specimens for examination. This plan has been found of great assistance, but the descriptions being of necessity extremely short, it seemed preferable to increase their length, and to obtain this result the following notes have been printed. These notes are by no means intended as a full description of the histological structure of the tissues, neither are they given for the instruction of the student in the various methods of section-cutting, injection, etc.; but simply to aid him in his examination of specimens. The specimens were given to the student ready for mounting, since time would not allow him to stain and clear each section for himself; but it is desirable that this course should be followed now and again. The various staining, clearing, and mounting reagents are those in general use, but a brief account of those hardening processes, etc., which gave very good specimens, has been included. One feels there cannot be too closely impressed upon a student the necessity of introducing method into his examination and description of specimens, and of making sketches to assist himself and his instructor. In the description of tissue preparation the same numbers and arrangements have been followed as those used in describing the structure of the specimens....

Lippincott's Pocket Histology is a go-to reference, review, and study tool for histology with a strong focus on high-yield topics and presentation It presents the essential information needed for course and board exam review in a concise, quick-reference format with tables, full-color images, and bullet-point text. The book contains multiple features identifying the clinical significance of concepts, as well as mnemonics to aid in the retention of facts. An index of terms and color-coded systems organization provide asy access to histological facts. This pocket-sized reference intuits how students typically study for exams and provides highly distilled content in one easily portable source.

This brand new title provides a highly illustrated and unambiguous introduction to the science, structure and function of cells, their related pathology, and in particular, helps readers master the basic principles of recognizing features of histological sections. Histology at a Glance: Presents the perfect combination of text and image; key concepts are explained and superbly illustrated Provides coverage of all the main body systems and the components of the tissues of these systems Features practical information on microscopy, including sample preparation and magnification Includes hints and tips to help recognize features in a histological specimen, and overcome common difficulties Contains self-assessment questions to help test learning and recognition Links to the author's histological website, which features many more tips and samples, at www.wiley.com/go/histologyataglance Histology at a Glance is the perfect guide for medical, dentistry and biomedical science students, junior doctors, and is ideal for independent learning programmes in histology.

This edition of the book is extensively revised and updated especially the practical section of each chapter. It is designed specifically for undergraduate medical and dental students. The text of this book is wrapped up in an efficient format, designed to increase the interest of readers. Updated high quality labeled photomicrographs now which can be used as an Atlas Simple, precise and student-friendly text Point-wise presentation for easy learning and quick recapitulation during examination Line diagrams for basic understanding of the tissue/organ Pencil sketches of sections (haematoxylin and eosin) along with salient points of identification, well integrated with text for understanding technical details of structures at the backdrop of theory Practical section comprising of enlarged high quality labeled photomicrographs at the end of each chapter with detailed explanation based on students' expectation to observe Clinical correlation of certain important structures Self-assessment exercise at the end of theory for revision of the topics studied

A Text - Book of Histology: Descriptive and Practical provides information pertinent to the general methods of histology. This book systematically describes the structure of the tissue or organ. Organized into 17 chapters, this book begins with an overview of the structure of the body as seen under the microscope. This text then discusses the general methods of staining reagents, clearing, mounting, and injection of blood vessels. Other chapters explain the different stages in karyokinesis, including network or resting stage, convolution, wreath, monaster, and dyaster. This book discusses as well the microscopical examination of amphibian and mammalian blood and examines the effects of reagents on human blood. The final chapter examines the human spinal cord stained with aniline. This book is a valuable resource for students.

Excerpt from A Course of Elementary Practical Histology This work is not only intended for medical students working in a well-furnished laboratory under a teacher, but for students of all denominations who can com mand the means and have the wish to construct for themselves a histological cabinet for study and future reference. With this object in view it differs from all other text books of histology in several particulars, but notably these It contains a list of all the apparatus required the classification of the structures which have to be collected is novel; and it contains much detail in the various processes anticipating the absence of a teacher. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

Designed not only as a reference textbook but also as a tool for students preparation for USMLE examinations, this book follows the traditional and logical sequence of cells to tissues to organs, the discussion on mitosis, the discussion on meiosis, and a consideration of the reproductive systems and has learning units and vocabulary.

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

A Practical Guide to the Histology of the Mouse provides a full-colour atlas of mouse histology. Mouse models of disease are used extensively in biomedical research with many hundreds of new models being generated each year. Complete phenotypic analysis of all of these models can benefit from histologic review of the tissues. This book is aimed at veterinary and medical pathologists who are unfamiliar with mouse tissues and scientists who wish to evaluate their own mouse models. It provides practical guidance on the collection, sampling and analysis of mouse tissue samples in order to maximize the information that can be gained from these tissues. As well as illustrating the normal microscopic anatomy of the mouse, the book also describes and explains the common anatomic variations, artefacts associated with tissue collection and background lesions to help the scientist to distinguish these changes from experimentally- induced lesions. This will be an essential bench-side companion for researchers and practitioners looking for an accessible and well-illustrated guide to mouse pathology. Written by experienced pathologists and specifically tailored to the needs of scientists and histologists Full colour throughout Provides advice on sampling tissues, necropsy and recording data Includes common anatomic variations, background lesions and artefacts which will help non-experts understand whether histologic variations seen are part of the normal background or related to their experimental manipulation

Krause's Essential Human Histology for Medical Students

Fully revised, new edition presenting undergraduates with latest information in human histology. Includes colour atlas of more than 80 slides, histological plates and a new section on light microbiology. Previous edition published in 2014.

Learn to identify histological structures and their correlated functions! Histology: An Essential Textbook is a concise, multimedia study guide for medical students who need to learn the functions and related correlations of cells, tissues, and organs of the human body. Professor D.J. Lowrie, Jr. has written a unique and practical medical histology modules originally created to replace live histology laboratory sessions. This resource will help medical students learn how to identify histological structures on slide preparations and electron micrographs. Short videos by the author, who demonstrates structures via digitized histology slides, provide additional guidance. Shorter, targeted content by numerous illustrations, self-assessment quizzes, and videos demonstrating key features of histological structures set this resource apart from existing, text-dense books. Key Features Nearly 850 images, consisting primarily of electron and light micrographs, aid in identification of histological structures and long-term retention Correlates histology with basic science disciplines, such as gross anatomy, embryology, and pathology allows students to integrate material effectively Over 1000 online multiple choice questions and answers mirror exam topics students frequently encounter in curriculum and the USMLE® Nearly 375 videos provide a personal tutor that teaches students histological structures and their functions Identification This is a must-have self-study guide for medical students, as well as a stellar teaching tool for instructors.

Excerpt from Histological Notes for the Use of Medical Students In taking the class of Practical Histology at the Owe College Medical School during the Summer Sessions of 188 1883, it has been my custom to give each student sheets containing a short account of the chief points to be observed: the specimens for examination. This plan has been found of great assistance, but the descriptions being of necessity extreme short, it seemed preferable to increase their length, and obtain this result the following notes have been printed. This new edition of Jaypee's well established "Colour Atlas and Practical Guide" has been enriched by the addition of a large number of new photomicrographs of human tissues. The text has been updated and the layout redesigned. Slides are arranged in groups based on similarity of appearance to aid accurate identification and extensive use of the atlas. The cerebral cortex is included.

This is a brand new edition of the leading reference work on histological techniques. It is an essential and invaluable resource suited to all those involved with histological preparations and applications, from the student to the highly experienced laboratory professional. This is a one stop reference book that the trainee histotechnologist can purchase at the beginning of his career and which will remain valuable to him as he increasingly gains experience in daily practice. Thoroughly revised and up-dated edition of the standard reference work in histotechnology that successfully integrates both theory and practice.Provides a single comprehensive resource on the tried and tested investigative techniques as well as coverage of the latest technical developments. Over 30 international expert contributors all of whom are involved in teaching, research and practice.Provides authoritative guidance on principles and practice of fixation and staining. Extensive use of summary tables, charts and boxes.Information is well set out and easy to retrieve. Six useful appendices included (SI units, solution preparation, specimen mounting, solubility). Provides practical information on measurements, preparation solutions that are used in daily laboratory practice. Color photomicrographs used extensively throughout. Better replicates the actual appearance of the specimen under the microscope. Brand new co-editors. New material on immunohistochemical and molecular diagnostic techniques.Enables user to keep abreast of latest advances in the field.

This book 'Human Histology Practical Book With Text & Viva Questions' is prepared for the First year Medical Graduate students for the Histology Practical. In this manual book students have to draw the diagrams in the provided blank spaces. As this book includes the text related to the Histology, Students need not to refer the text book of Histology during their Histology Practical hours. This book also includes the viva questions of Histology practical and slide identification features which will defiantly help the students during their Histology Practical Examination.
