Excerpt from Pathological Technique: A Practical Manual for Workers in Pathological Histology
The order and method of procedure in making a post mortem examination, including the various incisions, may be said to have been planned for the routine examination of normal or diffusely diseased organs. As soon as a notice able focal lesion is present the order of procedure and the

customary method of removal and of incision must be so altered as best to display the lesion. Instruments - The following instruments will be found extremely useful in the autopsy-room, although not all of them are necessary: The autopsy-table should be large, so as to accommodate on it the instruments and several dishes in addition to the body. It should have a slightly raised edge, and should slope gently toward an Opening in the center for the escape of fluids. The table is best made of zinc, and along one edge should have a centimeter scale. The water for use on the table is best supplied by a rubber tube from an overhead pipe reaching to within 60 to 100 cm. Of the table. The scales for weighing the various organs should have a large pan and gram and kilogram weights. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where the images such as portraits, maps, sketches etc We have endeavoured to keep the quality of the so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

This manual attempts to provide brief yet adequate, balanced and up-to-date basic information on the subject. A very brief account of all the major chapters from histological point of view has been presented in a simple and easy to understand manner. The layout of topics in this manual will help to an undergraduate from the examination point of view and a quick brush up of the subject in case of limitation of time in the examination.

It is important to understand that forensic histopathology is quite different compared to the rest of histology. Diagnostic histopathology is largely an apprenticeship, learned through experience and by visual demonstration and example. It is of great importance in criminal cases, as the presentation of microscopic evidence improves the legal decision of Courts and promotes justice. This book focuses on the borderland between forensic pathology and forensic histology. Forensic pathologists also benefit from a realistic perspective with more than 300 full-colour micrographs. The main advantage of this book is the modern concept of histopathology, with inclusion of immunohistochemical techniques of great utility to forensic pathologists, forensic pathology fellows, pathologists who consult in forensic cases, pathology residents, autopsy pathologists, coroners and forensic investigators.

In this manual, author has included the molecular techniques, immunohistochemistry, cell blocks, and immunofluorescence along with the conventional techniques. For students' easy understanding; many figures, charts, diagrams and tables have been included. At the same time, the volume of the book has been restricted; so that students do not become overburdened during preparation of examination. [Ed.]. The authors have aimed to produce a textbook for courses in cellular pathology, both in the United Kingdom and elsewhere. Also, they aimed to produce a book as a practical companion of Theory and Practice of Histological Techniques (Bancroft and Stevens, 1990) and to produce a laboratory manual containing a full repertoire of standard and non-standard, well-known and not-so-well-known histological techniques.

Prepared as per the latest syllabus prescribed by Medical Council of India, the key features of the book comprise:* Hand-drawn diagrams with labeling and spaces given for the students to draw the diagrams.* SLOs have been given for each slide which encourage self-learning.* All competencies given in the new curriculum, including basic ultrastructure competencies, have been included.This book is a must for every MBBS student for completing the histology practical.
