Terminal Ballistics: A Text and Atlas of Gunshot Wounds is a comprehensive guide that explains the science of forensic ballistics - focusing on the hardware, injury patterns, and forensic techniques

Online Library Text And Atlas

associated with gunshot wounds. The text begins by describing the anatomy and design of basic firearms and the fundamental components of ammunition rounds, .22 rimfire, and propellants. The author presents a

Online Library Text And Atlas

variety of gunshot injury patterns, and defines the concept of the pathological range of fire determination. He delineates patterns from injuries sustained by commonly fired rounds, including those acquired

Online Library Text And Atlas

after discharge from handguns, high velocity centerfire rifles, shot guns, and black powder weapons. More obscure injuries from air pistols, nail guns, and homemade weapons are also detailed.

Online Library Text And Atlas

Specific chapters identify the effects of intermediary targets, the mechanics of injuries sustained after a bullet passes through bone and the internal organs, and exit wounds. The author also observes situations that

Online Library Text And Atlas

mimic gunshot injury, a frequently neglected area of gunshot injury interpretation. This extensive resource also depicts the technical aspects of forensic wound ballistic examinations,

Online Library Text And Atlas

including protocol for managing the receipt of specimens from a gunshot wound surgical resection, gunshot residue sampling, and forensic radiology as applied to gunshot investigation. It outlines

Online Library Text And Atlas

crime scene investigation,
the autopsy and resulting
report, forensic
photography, and entomology.
The final chapter highlights
